

OPTUS BUSINESS MOBILE PERSONAL TRACKING AND DURESS SOLUTIONS

With more employees working away from the office, it's becoming difficult for organisations to provide a safe and secure working environment at all times. Dangerous situations can not always be identified before they happen but early intervention is usually the key to defusing a situation.

Optus has partnered with SkyNet Mobile Communications and GoFinder, suppliers of mobile tracking and duress applications to provide solutions to keep your employees safe.

PERSONAL TRACKING AND DURESS SOLUTIONS

Whether your organisation has deployed basic voice handsets or advanced Smartphones we can provide a solution to meet your business requirements.

- > **SimPoint**
Entry level personal tracking solution using GSM triangulation technology providing up to 70 metre accuracy in city areas.
- > **GoFinder**
Personal tracking and duress solution using both GPS and GSM triangulation technology providing accuracy with 5 metres. Works on GPS enabled symbian devices.
- > **SatTrack**
Advanced personal tracking and duress solution using GPS. Works on GPS enabled BlackBerry devices.

KEY BENEFITS

- > Mobile fleet visibility means better managed jobs, improved response times, higher productivity and lower transport costs.
- > In the event of an emergency locate key staff instantly.
- > Low cost investment as solution utilises mobile phones and web interface; requires no additional hardware.
- > Managers can locate field staff while they are away from their vehicles.

ABOUT GOFINDER

GoFinder is a Satellite tracking services company offering Australian designed online location platforms and mapping. Solutions can track the individual, vehicle or an expensive asset. Privately owned, GoFinder boasts a wide selection of clients ranging from small private companies to TOP 100 organisations listed on the ASX. GoFinder prides itself on finding the right solutions backed up by fast, efficient, personal service

ABOUT SKYNET

SkyNet provides wireless location-based products and services to ensure customers can track valuable assets such as people and equipment. These offerings range from global voice and data products to tracking applications for the land transport, aviation and marine industries. SkyNet solutions combine the latest satellite and terrestrial GSM technologies with a fully redundant data gateway, a web interface and robust security services. SkyNet gives customers access to a security control room with escalation capabilities or provides them with self-monitoring services.
