

Mobile Directory from Optus.

Easily access staff contact details from your mobile.

Mobile Directory from Optus is an easy to use solution that enables enterprise users to access their corporate directory details from a mobile phone using Light Weight Directory Access Protocol (LDAP). The premium solution utilises Java; however the service can also be accessed via WAP or SMS*.

Mobile Directory from Optus uses the Optus Mobile network to transfer the information from the Directory service to the handset. The Mobile Directory connects to the company's LDAP server, performs a search on their corporate directory based on the submitted information, and returns the contact details of the requested person.

Mobile Directory from Optus is designed with simplicity in mind. Installation is quick and easy. Optus will provide a web link and login details to the Mobile Directory website. Here, the administrator will have the ability to:

- Set up the service and manage the staff directory, including what information is made available for viewing
- Enter authorised users
- Generate detailed usage report
- Notify users on how to set up the service on their phones.

The Mobile Directory from Optus is supported by national and international roaming, where Optus has roaming agreements. Thus, the directory can be accessed from anywhere overseas where there is mobile coverage available for Optus subscribers.

BUSINESS BENEFITS

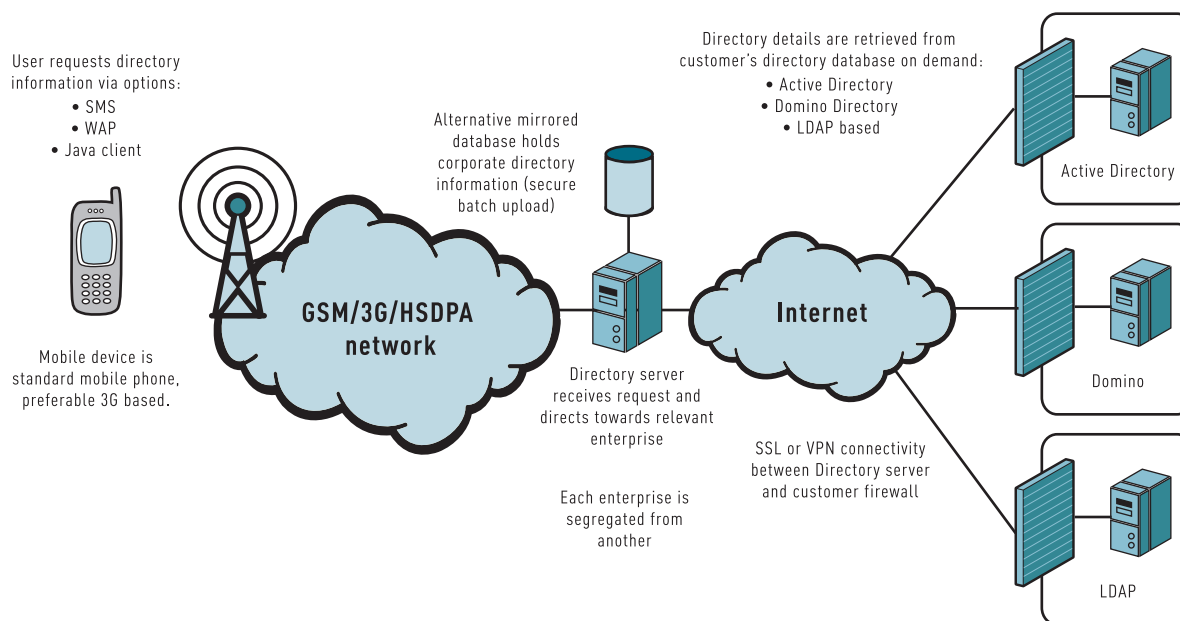

Mobile Directory from Optus was designed with the needs of mobile professionals in mind. Its benefits include:

- Ability to access staff contact information quickly and easily from your mobile device resulting in productivity gains
- Ability to access staff contact information nationally and internationally ensuring widespread availability
- Option to choose the best method of accessing the Mobile Directory for your business whether it is Java, WAP or SMS
- No set up costs†. Simply register for the Mobile Directory and begin taking advantage of its great features
- Low usage cost. Usage costs are based around your company's mobile pricing and lookup costs should be cheaper than the cost of a phone call to your receptionist.

THREE OPTIONS TO ACCESS THE MOBILE DIRECTORY

The Mobile Directory from Optus can be accessed through Java, WAP or SMS depending on your phone type.

How it works:

HARDWARE SPECIFICATIONS

The Java client is provided on selected 3G mobile phones connected to the Optus Mobile network.

Optus Mobile users with other mobile phones can also access the Mobile Directory via WAP or SMS. Fleet users with non-Optus phones can use the SMS option.
