

SKYNET MOBILE COMMUNICATIONS

SkyNet provides wireless location-based products and services to ensure customers can track valuable assets such as people and equipment. These offerings range from global voice and data products to tracking applications for the land transport, aviation and marine industries. SkyNet solutions combine the latest satellite and terrestrial GSM technologies with a fully redundant data gateway, a web interface and robust security services. SkyNet gives customers access to a security control room with escalation capabilities or provides them with self-monitoring services.

SOLUTIONS

SkyNet's location-based services, many of which are accessible on handheld devices such as the BlackBerry, provide:

- Global fleet coverage including land, aircraft and marine asset management
- Tracking of marine craft including anti-theft monitoring and man overboard and duress alerts
- Global flight management and tracking systems for aircraft and development of predictive engineering maintenance programs
- Low-cost, real-time vehicle management, duress alarms, instantaneous fleet data, monitoring of vehicle use and confirmation of vehicle logs and route reports
- Detailed custom reports and street-by-street route information accessible securely from any internet-capable computer
- A fleet-wide picture of vehicles and current status
- Self-administration and client-limited access.

BENEFITS

SkyNet solutions allow customers to:

- Make critical decisions in real time
- Enhance the profitability of any working fleet
- Maximise returns on technology investment
- Improve productivity by enabling on-the-fly job rerouting and trip analysis
- Coordinate port logistics to expedite ship turnaround
- Maximise equipment lifespan by coordinating engineering schedules.
