

Unlock the power of telematics across your fleet

Help increase operational
efficiency and reduce costs

OPTUS

Whether you're interested in optimising the performance of your vehicle fleet, reducing costs, tracking valuable assets on the move, improving safety and compliance or gaining insights into the health of your vehicles and equipment, telematics offers a rich source of data to enhance operational performance and decision-making.

Today Optus, in partnership with industry leader, Radius Telematics, is offering a comprehensive solution that brings together the strengths of the Optus mobile network with a choice of robust telematics devices – either plug and play or hardwired into your vehicles – all managed via the intuitive and smart Kinesis platform.

Why invest in Optus Telematics?

Fleet Optimisation: Optimise routes, reduce fuel consumption and enhance vehicle maintenance schedules. This can lead to cost savings and increased efficiency.

Safety and Compliance: Real-time monitoring of driver behaviour, such as speeding, harsh braking and erratic driving, promotes safer driving practices and helps compliance with regulations, reducing accidents and liabilities.

Asset Tracking: Real-time tracking helps prevent theft, safeguarding assets and reducing losses.

Customer Service: Improve customer service by providing accurate ETAs, enabling route changes in response to delays and enhancing communication with customers, resulting in higher satisfaction.

Maintenance Management: Telematics offers insights into the health of vehicles and equipment, enabling proactive maintenance and reducing downtime, repair costs and unexpected breakdowns.

Environmental Impact: Monitor and reduce carbon emissions by optimising routes, reducing idling time and promoting fuel-efficient driving.

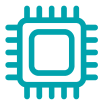

Data-Driven Decision-Making: Analyse telematics data to make informed business decisions, such as optimising supply chains, improving logistics and identifying trends for future planning.

How it works

The Optus Telematics solution includes:

- Hardware: choice of either a Teltonika FMC003 (plug and play device) or FMC230, which is an enterprise-grade plug and play or hardwired device
- Connectivity: Optus M2M SIMs, with the Optus Control Centre providing management, intelligence, automation and security features
- Platform: Kinesis (for small to medium businesses) or Kinesis Pro, a Radius proprietary platform
- Camera
 - 2-channel DVR and 4-channel DVR (forward facing and driver facing or multi cam)

The Solution?

Hardware

Choice of either a Teltonika FMC003 (plug and play device) or FMC230 enterprise-grade plug and play **or** hardwired device

Connectivity

Optus M2M SIMs

Control Platform

Kinesis or Kinesis Pro

Camera

2-channel DVR and 4-channel DVR (forward facing and driver facing or multi cam)

Platform Features:

Kinesis/Kinesis Pro, a proprietary platform from Radius

- Intuitive interface and customisation
- Robust data analytics and reporting
- Open API for seamless data sharing
- IoT sensor integration options
- Compliance and regulatory reporting
- Asset tracking and management features
- Comprehensive customer support

Benefits

- Improved fleet efficiency
- Enhanced driver safety
- Potential cost savings
- Helps with regulatory compliance
- Fleet visibility
- Sustainability focus
- Data security
- Scalability
- Increased productivity
- Proactive maintenance
- Return on Investment (ROI)

Why Optus?

Optus Telematics can help you enhance operational efficiency, safety, asset protection, customer satisfaction and environmental responsibility, while also providing valuable data-driven insights for better decision-making.

As well as providing the connectivity you need (4G, NB-IoT, Optus IoT Flex), our highly experienced team will deliver an end-to-end solution tailored to your needs, with optional managed services, installation and project management and a strongly competitive commercial model.
