

Making enterprise mobility management simple *Yes*

Helping you to manage the needs of your mobile workforce, without compromising your company's security

How EMM can help you

- Reduces the risk of data breaches
- Deploys and manages mobile apps through a secure app storefront
- Simplifies management processes for multi-OS (iOS, Android, Windows) devices and users
- Allows employees to use personal smart devices for work, saving on purchasing corporate devices
- Secures data and intellectual property and manages mobile devices accessing this data
- Improves productivity and collaboration
- Improves employee satisfaction and IT confidence

Today's employees bring their own smart devices to work to access emails, apps and data on-the-go. A mobile workforce can have clear benefits for your enterprise, providing faster responses and improved productivity. However, IT heads today grapple with the complex challenge of managing multiple users with different needs and devices, while maintaining employee privacy and ensuring company data and assets are secure on corporate owned and BYOD devices.

With Optus' Enterprise Mobility Management (EMM), powered by MobileIron, we provide a simple solution to help address Mobile IT concerns. It's a smart solution that enables you to securely control access, applications and content as well as set policies to protect information and access without wasting time on admin. It's easier, you stay in control, employee privacy is maintained and we've made it more secure than ever.

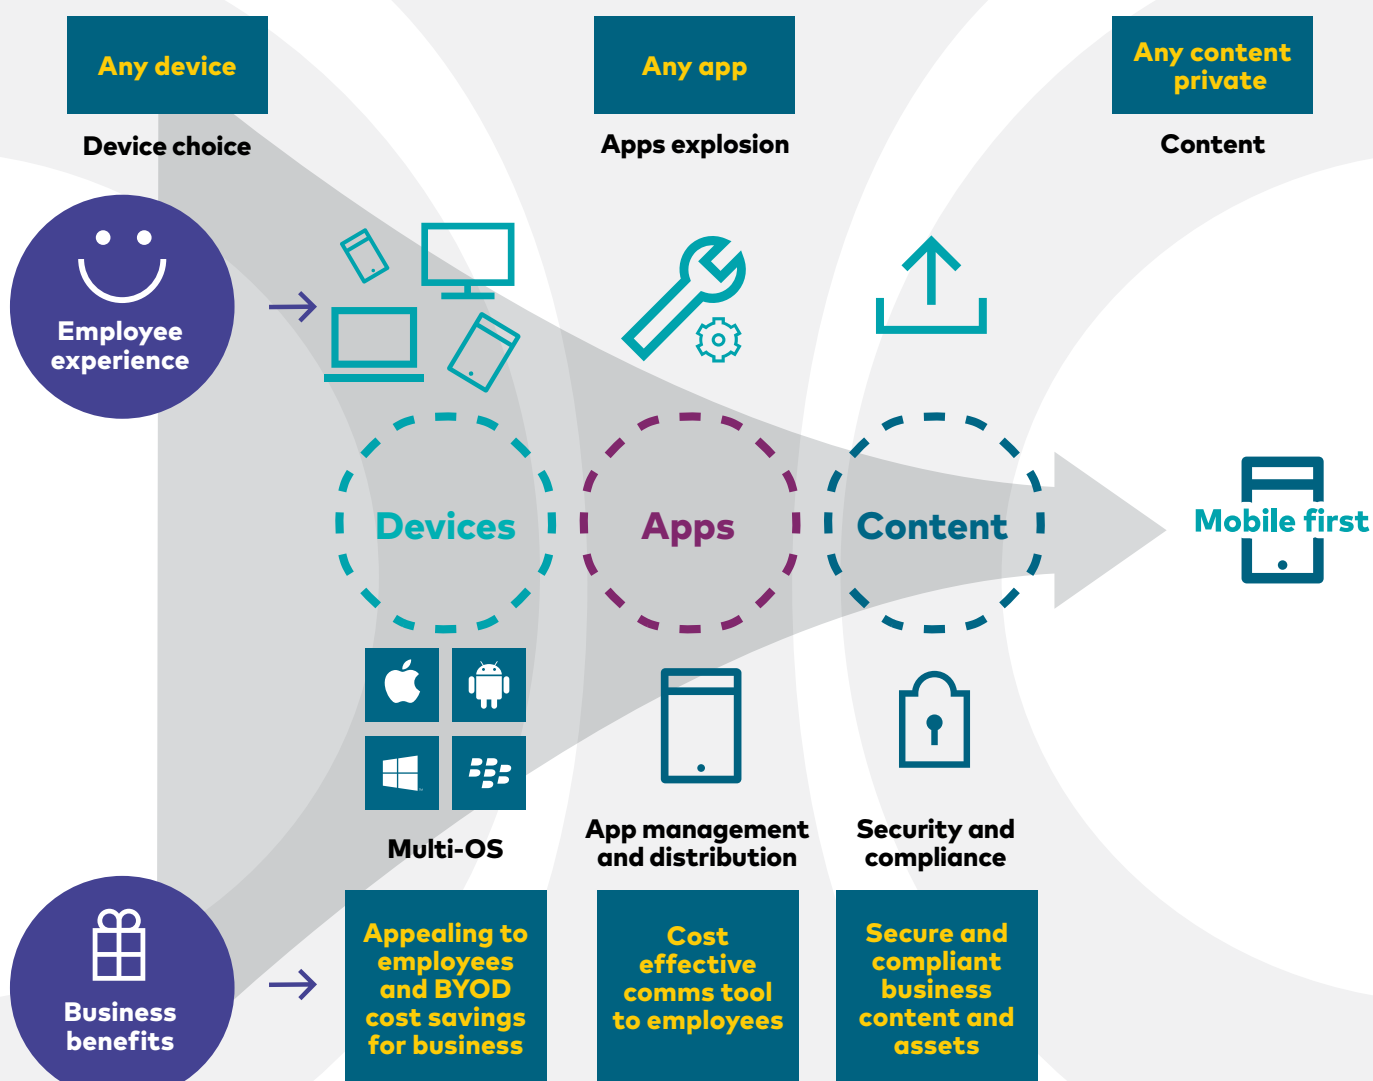

Compatible with all leading mobile OS platforms and independent of location and mobile network, Optus EMM facilitates the seamless control of mobile devices globally.

Optus' EMM solution is provided as either a managed or unmanaged solution and is deployed as a Cloud or on-premise solution. Offered to businesses of all sizes the solution requires:

- A once-off set up and installation fee. A minimum licence commitment per device from as low as 25 licenses
- Licences are offered as annual subscription licences or once-off Perpetual Licences which include an annual software assurance maintenance fee.

Features

Device Security	• Available for both corporate owned and BYOD devices • Executes mobile security policies and restricts access to features such as camera, screen capture and more • Locks, locates and wipes data from compromised devices
App Security	• Securely deploys both company and public applications to employee devices
Content Security	• Enables secure and easy access to web content within corporate intranet for employees • Gives employees secure access to back-end data repositories such as SharePoint and file servers
IT Management Tools	• Simple easy to use IT management portal for deploying security policies, tracking devices and monitoring usage • Enables remote screen sharing with iOS devices for simple and effective iOS support • Managing mobile deployments without being tied to a desktop or laptop
Mobile Device Management	• Tracking devices on different operating systems and with different carriers • Monitor data usage to set limits and alert end users in real time, to avoid exceeding limits
BYOD Privacy, Protection and Experience	• Certificate based identity • Self service provisioning/configuration • Manages delivery of mobile apps to devices with native experience, while maintaining security levels

A **smart** solution for everyone

IT managers

Centralised over the air (OTA) management and configuration of devices

Remotely erase data on misplaced/stolen devices

Act on helpdesk requests remotely

Receive troubleshooting help via the portal

Access the Self-Service Portal to locate lost phones

Reporting and review usage statistics and patterns

Employees with BYOD are already familiar with their devices, making it easier for them to self-manage (maintain and update) their own phones

Marketing and sales managers

Securely deploy sales and marketing resources to staff through an enterprise app store

Protect sensitive company data, thus protecting the company's reputation and customer loyalty

Finance managers

Avoid cost of losing valuable assets, company data and IP

Cost savings from a BYOD program - allowing the use of personal devices for work

Access to detailed real-time information on employee usage patterns to identify potential risks and develop input for communications expenditure

Employees

Avoid being forced to use a corporate-issued device which is often outdated and unfamiliar technology

Flexibility and freedom of using their preferred device at work

Peace of mind for the employee that their private content remains private
