

Complete email protection, delivered in the cloud

Optus Secure Email Gateway Cloud powered by Trustwave® helps provide protection at the internet level, provides centralised security in distributed environments and helps eliminate threats before they reach the network.

Key Benefits

- **Simplified management** – eliminate the overhead of software upgrades and hardware management while maintaining full control over your email policies
- **Reduced costs** – realise savings through reduced storage and bandwidth needs and less time spent on administration
- **Advanced security** – gain industry leading protection against phishing, blended and targeted threats
- **Web-based management** – role-based access controls along with granular auditing capability

Optus Secure Email Gateway (SEG) powered by Trustwave reduces business costs, complexity and uncertainty while delivering advanced protection against modern threats, policy configuration and in-depth data security and compliance management.

- Reduce complexity and uncertainty
- Advanced security protection before threats can reach the corporate network
- Reduced business costs
- Retain full control of policies, configuration and reporting

How it works

Helping to protect the network with Trustwave SEG Cloud is fast and easy. Simply point your MX records to the Trustwave data centres, and all inbound email is inspected before it reaches your network, providing industry leading protection against phishing, blended and targeted threats – and enabling significant bandwidth and storage savings.

Trustwave SEG Cloud analyses, manages and controls outbound content to provide DLP level inspection of emails and attachments to effectively manage confidential data and help meet stringent regulatory requirements.

Flexible service options

Standard Protection leading anti-spam and anti-virus protection

Optional Add-On Services

Data Protection DLP level inspection of inbound and outbound emails and attachments

Advanced Protection Blended Threat Module provides real-time protection from malicious links in emails by providing malware scans

Acceptable Use Filters explicit adult images and inappropriate language from your emails to maintain a safe work environment

Content Security Includes Data Protection, Advanced Protection and Acceptable Use packages in an all-inclusive bundle
