

Optus Managed SASE

Secure, unify, and simplify your network with trusted expert management

Optus for Enterprise

yes OPTUS

Modern businesses face a surge of new challenges

- Hybrid workforces and cloud adoption make it harder to secure and manage networks.
- Critical applications and data span multiple environments, creating blind spots and inconsistent protection.
- Legacy security tools and network infrastructure struggle to keep pace with digital demands.
- IT teams face growing compliance requirements and skilled resource shortages.

To address these challenges, organisations need a converged solution that unifies security and networking, simplifies operations, and supports digital transformation. Optus Managed SASE does all this for you.

Secure and connect your business with one solution

Optus Managed SASE combines next-generation network and cloud-delivered security into a single, unified architecture. It consolidates SD-WAN with critical security functions of Security Service Edge (SSE) such as Cloud Access Security Broker (CASB), Cloud Firewall, Secure Web Gateway (SWG) and Zero Trust Network Access (ZTNA).

This integrated approach enables consistent protection, reliable connectivity, and seamless user experiences — where your people and applications are.

The smart way to converge networking and security

Optus Managed SASE reduces complexity by providing one central point of contact to manage your security and network needs. It balances user experience and productivity with the need to protect corporate and customer data, and it adapts as your organisation grows.

What you get with Optus Managed SASE

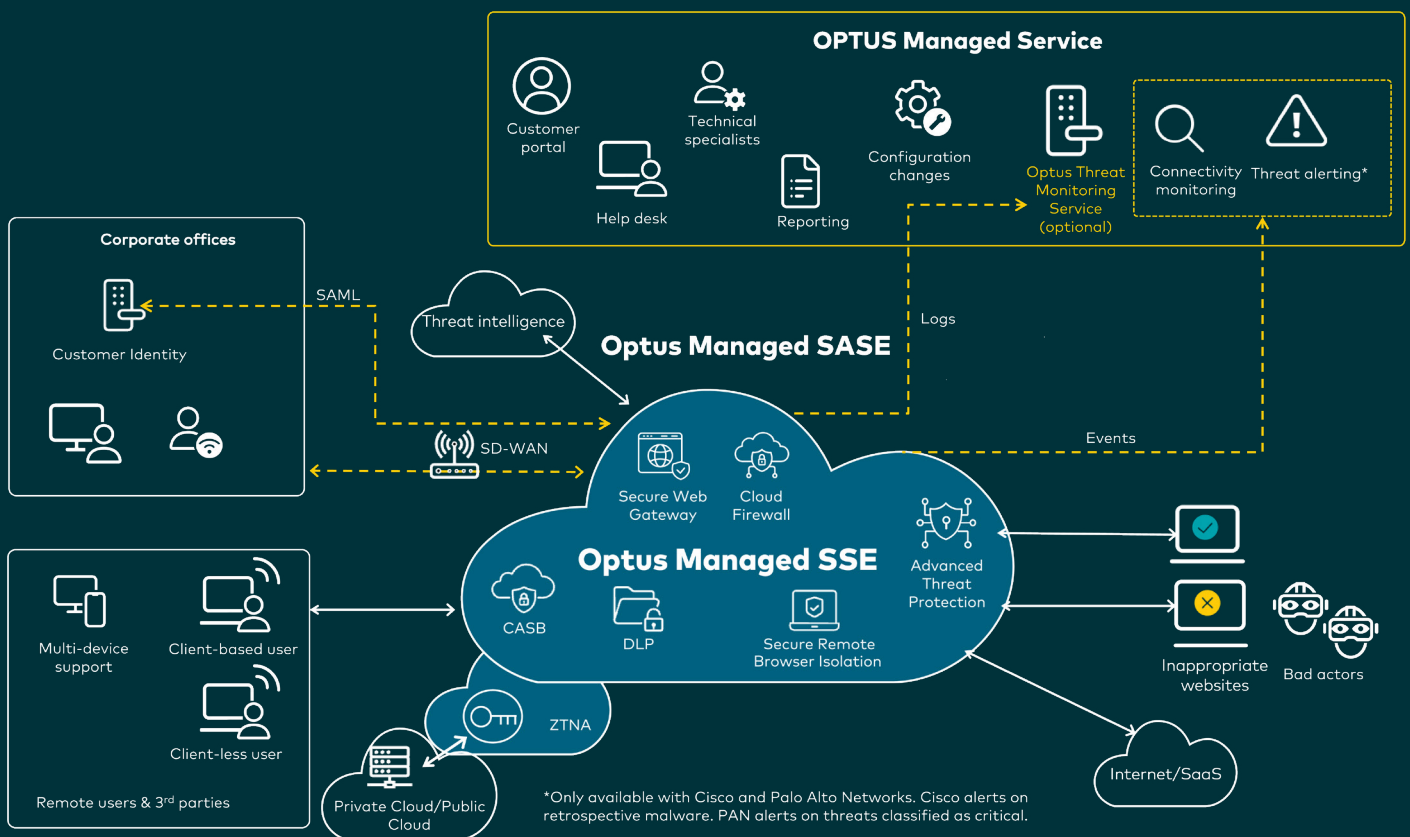

- **Unified security and networking:** Combines SD-WAN with SSE (ZTNA, SWG, CASB, Cloud Firewall) for simplified management.
- **Consistent protection:** Ensures the same level of security across all users, devices, and locations.
- **Zero Trust enforcement:** Authenticates every access attempt and applies granular access controls to protect sensitive data.
- **Real-time visibility and control:** Centralised dashboards give you full insight into performance and security posture.
- **Optimised user experience:** Direct-to-cloud connectivity reduces latency and improves application performance.

How you will benefit

- **Expert support:** Decades of experience designing, deploying and optimising networks for complex, highly regulated customers
- **Simplify your network and security:** One central point of contact to reduce complexity and maximise your investment.
- **Respond faster to incidents:** Leverage Optus' Australian-based integrated Security and Network Operations Centre for rapid detection, response, and recovery.
- **Built-in security from the start:** IRAP assessed with security-cleared engineers ensure every service is secure by design, not a bolt-on.
- **Lower total cost of ownership:** Reduce hardware refresh cycles, licensing sprawl, and reliance on scarce in-house expertise.
- **Protect your business and data:** Enforce consistent security policies, meet compliance obligations, and reduce breach risk.
- **Scale with confidence:** Support new sites, users, and applications without costly infrastructure upgrades.

How it works

Powered by industry-leading partners, expertly managed by Optus

Delivered through globally trusted vendors including Cisco, HPE Aruba Networking, Palo Alto Networks and Zscaler, Optus Managed SASE provides world-class security and networking performance. Seamlessly managed by Optus' experts, you gain end-to-end support, from design and deployment to monitoring and ongoing optimisation, so your teams can focus on driving business outcomes. Make networking and security simpler and stronger with one trusted partner.
