Allows your employees to communicate and collaborate from anywhere using their device of choice
- **Seamless integration with Cisco**
Webex Meetings and Teams for an advanced collaboration experience

To compete in the digital era, organisations are undergoing significant change. They are striving to collaborate better, faster and more effectively than ever before. Many have recognised the need to innovate, as well as offering a great environment for people to work and with improved employee experience. To do this, organisations are looking for a cloud-based collaboration solution that is fast to deploy, scales easily, requires minimal upfront investment and is always current.

Optus Cloud Calling helps you meet the digital transformation challenge by allowing your workforce to become more agile and mobile – your teams can access these collaboration tools in a safe and secure way via a desk phone, computer, mobile or tablet.

Optus Cloud Calling delivers a unique cloud collaboration experience, coupled with the latest productivity tools from the Cisco Collaboration portfolio. The service is powered by Cisco's Webex Calling platform, removing the need to deploy, maintain and manage your own infrastructure.

We have listened to our customers and simplified the offer to fit with organisations like yours.

Step-by-step guide	
Step 1 Tell us how many users you have.	
Step 2 Mix and match your handsets and choose from: basic phone, video phone or receptionist phone.	
Step 3 Tell us how many shared spaces you have.	
Step 4 Mix and match your spaces and choose from: conference phone, huddle space device, medium VC unit, large VC unit.	

Once you are set up, you will have access to the following features:

- Comprehensive cloud calling with enterprise-grade PBX features
- Group features, including auto-attendant, hunt groups and pickup groups
- Collaborate and communicate anywhere you have Internet access
- Choose which device to make and receive voice and video calls on – phone, computer, tablet or mobile

We also have some optional add-ons to enhance your Optus Cloud Calling experience:

Add-On	Description
Included National Calls	Provides a package at a fixed monthly charge per end user for standard local calls, national calls and calls to Australian mobiles.
Cisco Webex Meetings	Meet with your colleagues, customers and business partners with market leading voice, video and web conferencing tools.
Training	Skilled trainers deliver two training services: • Train the trainer sessions for delegates to train end users in handsets, voicemail, end user portal and soft clients. • Training for IT administrators in simple, self-service changes in the Optus Cloud Calling customer administration portal.

Get started today

To help support you on this journey, Optus Business has one of the largest dedicated teams of collaboration specialists in Australia. Give us a call.
