

### Package content

In the box you will find  
1x 5G device  
1x Power supply  
1x AC cable  
1x Quick Start Guide

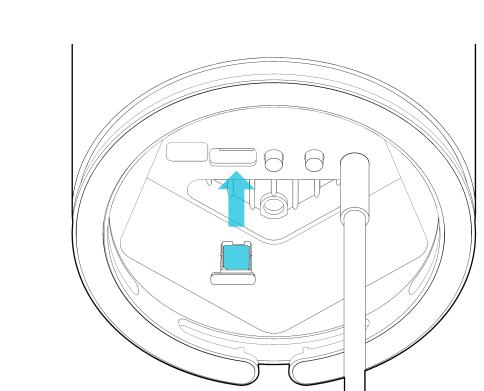

### 1. Place Gateway

Place your unit in a place with few obstructions, ideally near a window. Make sure there is a nearby outlet.

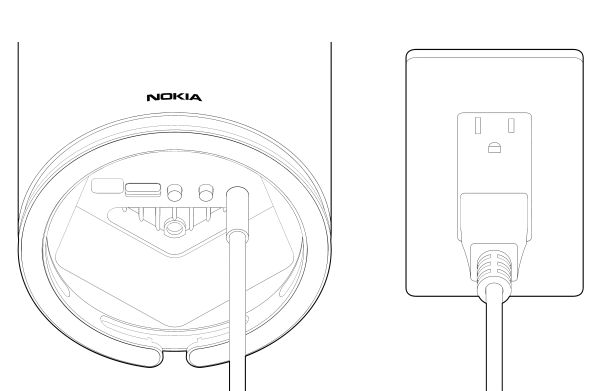

### 2. Insert SIM

Remove the SIM tray using the finger groove. Place the SIM card in the tray and reinsert it into the gateway.

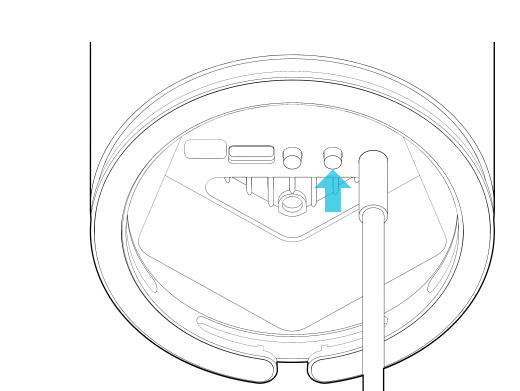

### 3. Connect power cable

Plug in the power adapter and then connect it to the back of your gateway.

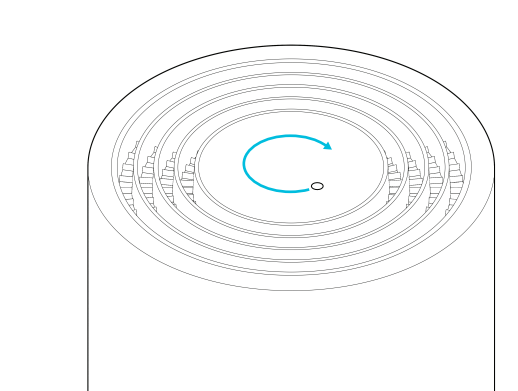

### 4. Power on

Push the on/off button, the LED on the top of the device will turn on.

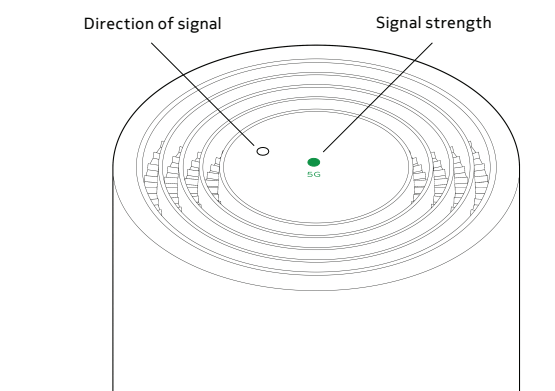

### 5. Wait for search to finish

The unit will boot up and then begin searching, results will be shown in a couple of minutes.

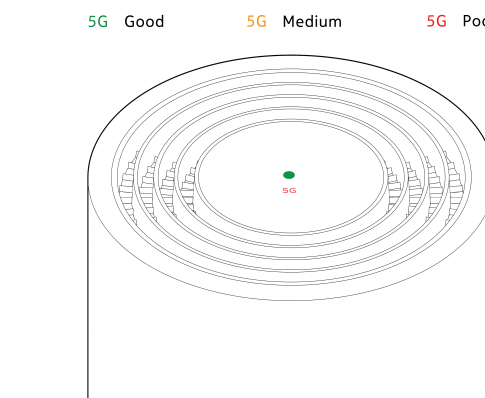

### 6. Check status lights

If both the status LED and 5G signal are green you have a great connection and you are done.

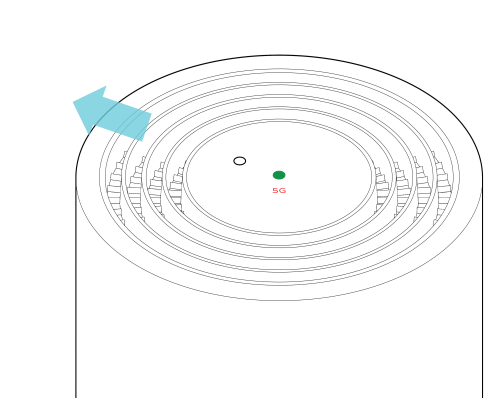

### 7. Relocate if signal is poor

If your 5G signal is off, red or orange you might need to reposition your unit

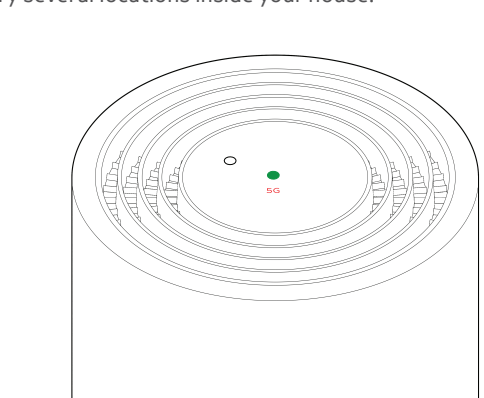

### 8. Recommended direction

You can use the signal direction light as an indicator of where in your home you can try to move the unit.

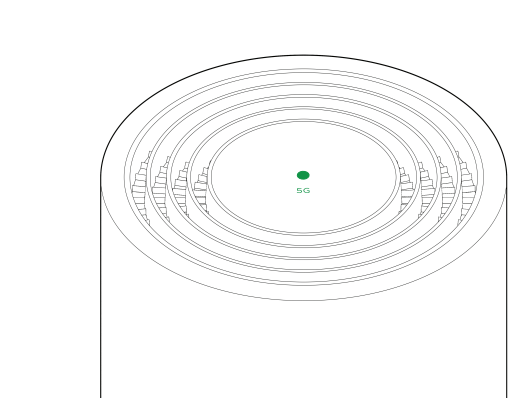

### 9. Power on at new location

The gateway will look for a better signal. The signal direction light typically points to a window or to an outside facing wall when the reception is good. You may try several locations inside your house.

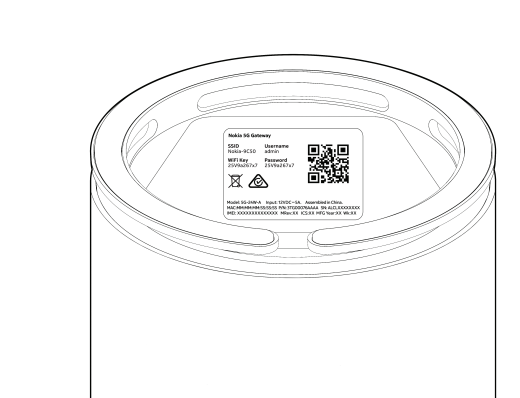

### 10. Do not relocate

Once you've achieved a good signal, do not relocate or rotate the gateway. If the position changes, power off and on the device again.

### 11. Connect to Wi-Fi

Connect your devices using the SSID and Wi-Fi key shown on the bottom of the gateway.

### Enjoy 5G!

To configure your Wi-Fi network, visit 192.168.1.254 in your browser.
