INSTALLATION GUIDE (The thing you're reading)

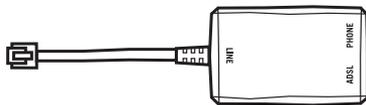

ETHERNET CABLE

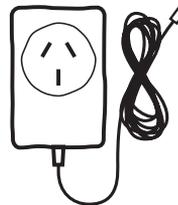

TELEPHONE CABLE

ADSL LINE FILTER

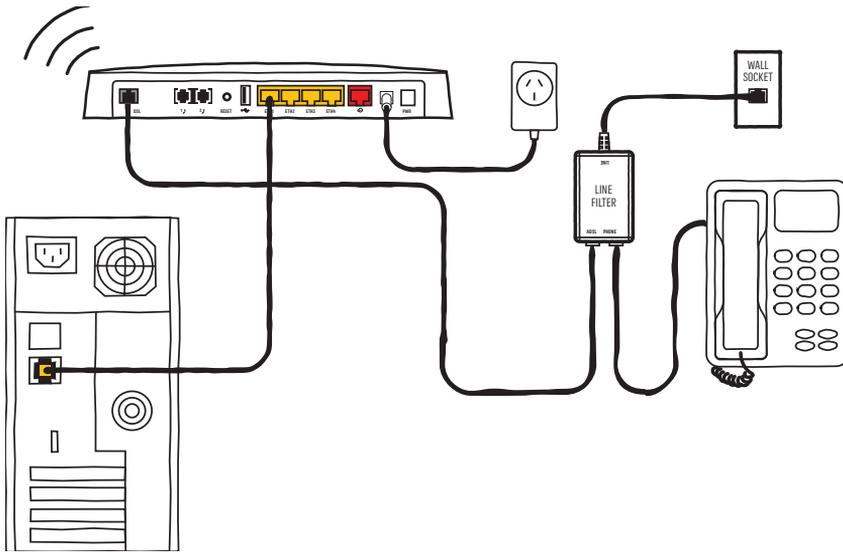

POWER ADAPTER

STEP 2 CONNECT TO YOUR SHINY NEW MODEM - THERE ARE TWO WAYS

CONNECT BY ETHERNET

You'll enjoy speedier internet – it's our recommended way to go. Just connect yellow with yellow – the yellow Ethernet cable with the yellow socket on your modem and the other end to your computer. Plug in the power cable at the wall and the other end into your modem.

TIP: If you have lots of devices, just get an extra ADSL filter for each phone and refer to the diagram above.

CONNECT BY WIFI

WiFi is the cable free way to connect your computer and devices to the internet. So you can use them around the house and office.

1 Locate the WiFi settings on your computer or other device. These will vary depending on the gadget you're connecting to. Give us a shout if you're having trouble finding them.

2 Select the WiFi Network that's on your WiFi magnet and enter the password.

TIP: It should look something like this.

**YOU'LL NEED
THIS TO GET YOUR
WIFI GOING**

WIFI NETWORK NAME

PASSWORD

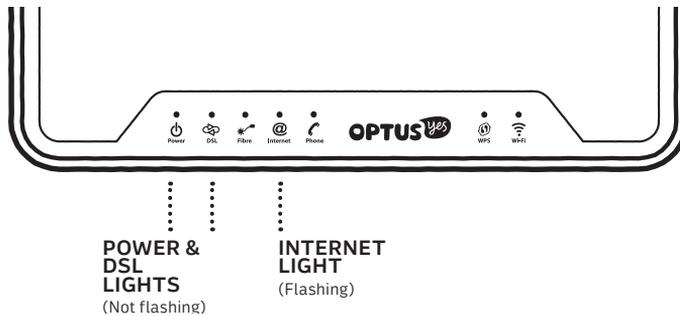

OPTUS 

Heads-up: If you choose to customise these settings, your details will be different to what is printed on your WiFi magnet. A factory reset will reset these settings back to what is printed on the magnet so don't lose it.

STEP 3 TIME TO FIRE IT UP!

1 Open up your web browser and head to the website you'd like to view.

2 Check that the power light and DSL lights on your modem are on. The only light that should now be flashing is the Internet light. If it is, your website should have loaded and you'll be all set to start browsing.

Heads-up: We recommend you don't use the phone ports on your new modem.

CONGRATS, YOU'RE HAPPILY UP AND RUNNING.

HELP AND SUPPORT

DID YOU CONNECT SUCCESSFULLY? STILL NEED HELP?

Like any IT guru will tell you, first try restarting your modem by switching off the power on the back, wait 10 seconds, then turn it back on again. Give it a few minutes to restart and reset your connection.

STILL NOT CONNECTED?

Open up your browser and type 192.168.0.1. You'll be redirected to a login page. Login with your personal OptusNet email and password (you'll find these on the second email we sent you called 'Step 2: Here's your connection date and important info.') and hit 'apply'. It could take a few minutes, but you should now be connected. To confirm it's worked, go back to 192.168.0.1.

FORGOT YOUR PASSWORD?

Don't worry! The default WiFi Network Name (SSID) and Password can be found on the Wireless Information Magnet in the box. It's also on the bottom of the modem. If you've changed this, you can reset it to default by factory resetting your modem. To do this, insert something pointed (like a pen) in the reset

button on the back of the device.

NEED TO CHANGE YOUR MODEM SETTINGS?

To change your modem settings, go to 192.168.0.1 and navigate through the menu options, then select the setting you want to change. If you change your password, make sure you keep the new password somewhere safe.

STILL HAVING TROUBLE?

No worries, we're always here to help.
